Rate Limiting Interceptor

Itay Harush

Nov 26

OVERVIEW

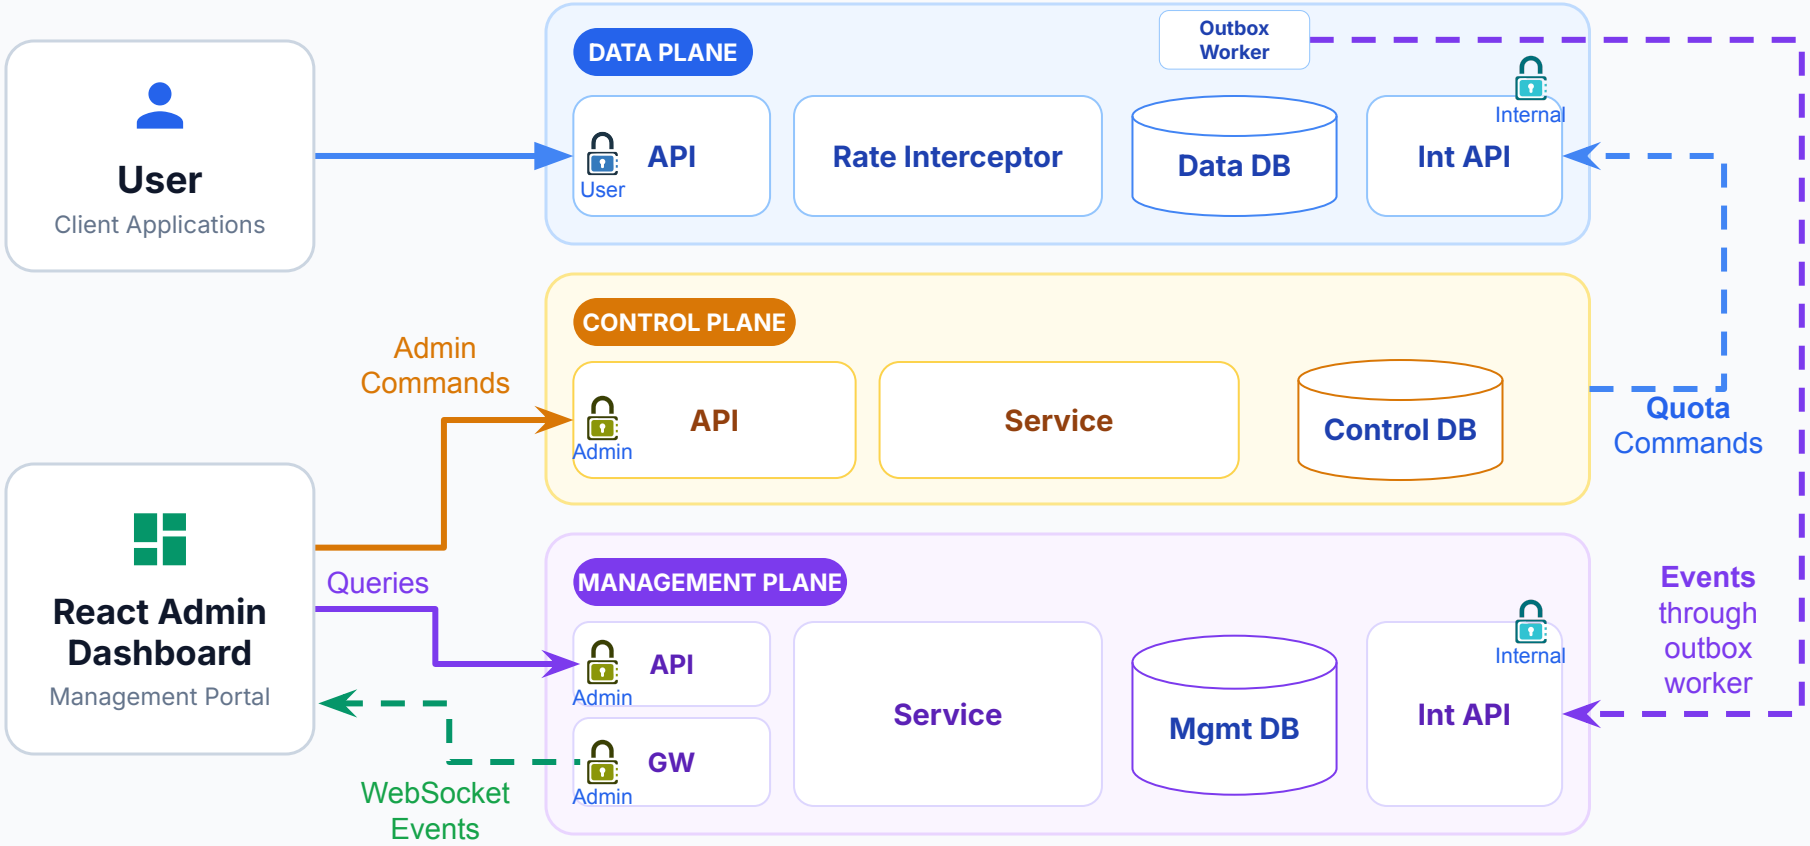

3-Layer System Concept

Clear Ownership | Isolation | Independent Scaling | Granular Permissions

SYSTEM OVERVIEW

High Level Architecture

TECHNICAL

Discussion Points

Race Condition
Atomic check and set execution

Identity Extraction
Secure identity parsing from token

Informative Headers
Standardized response metadata headers

Sliding Window Algorithm
Dynamic sliding vs. fixed window rate limit

Scaled Layers
Independent scaling across different system layers

Real-Time Monitoring
Live streaming vs. Refresh vs. HTTP polling
